PROJECTS

Pair Yo' Pet (Python, Flask, JavaScript, React, Redux, CSS3, Webpack, PostgreSQL)

[Live Site](#) | [GitHub](#)

Social platform web app built on a Python / Flask backend with React / Redux frontend and SQLAlchemy ORM on top of a PostgreSQL database.

- Architected backend schema to connect the React frontend to a Postgres database through a RESTful API.
- Stored high quality images in AWS S3 to reduce server load and allow for scalability.
- Assembled private messaging functionality between users through innovative database organization.

QuestTrackr (JavaScript, HTML5, CSS3, Webpack)

[Live Site](#) | [GitHub](#)

Productivity web app built on an Express.js backend with Pug templating and a Sequelize ORM on top of a PostgreSQL database.

- Utilized Vanilla JavaScript to render elements from an AJAX call to an API route
- Implemented OOP approach to generate Quest and Raid classes from common Task class
- Managed DOM events to easily control player input and progress visualization.

Laughs (Python, Flask, JavaScript, React, Redux, CSS3, Webpack, PostgreSQL)

[Live Site](#) | [GitHub](#)

Joke sharing web app built on a Python / Flask backend with React / Redux frontend and SQLAlchemy ORM on top of a PostgreSQL database.

- Leveraged Redux to handle all high-level state changes and present complex data relationships clearly.
- Focused on a single fetch, normalized Redux state and usage of higher order components.
- Protected resources via a custom backend and frontend user authentication pattern.
